Infrastructure bill: Supporting business

An efficient transportation and communications network means we can attract businesses and the movement of goods, services and manufacturing industries.

This efficient transportation network has an immediate positive impact on our community and a unique value proposition that our region has been able to leverage for numer- ous years. The 5-1-9 inter-regional highway has become the ‘Cayuga-Seneca’ Expressway for the Finger Lakes area, as well as the traffic feeder for the Finger Lakes tourist trade.

In the future, the inter-modal transportation network will be expanded to 60% of the region’s pop- ulation in a single day, and more than a $2.5 billion economic impact on our region.

It is by no accident that the Finger Lakes Area Cham- ber of Commerce and our regional business commu- nity’s success is due to the expansion and maintenance of our transportation and infrastructure network. Continuous research and meeting the needs of our evolving business community ensures economic growth. Continuously renewed infrastructure bill that will provide for the funding of roads and bridges. The legis- lation, which recently passed, the U.S. Senate, includes renewal of existing transportation spread- ing funds for local, state, and regional infrastructure. The theory is simple. More transportation development means more economic growth.

The area Chamber of Commerce supports the legis- lation that will provide for the funding of roads and bridges. The legislation recently passed, the U.S. Senate, includes renewal of existing transportation spread- ing funds for local, state, and regional infrastructure. The theory is simple. More transportation development means more economic growth.
